

Step 1: Add Table to Data Model

From the left side:

- Drag **Orders** table
- Drop it in the center area where it says:

Drag tables here to create a data model

This loads the dataset.

Step 2: Open Worksheet

At the bottom:

- Click **Sheet1**

Now you'll enter the visualization page.

Step 3: Create a Simple Bar Chart

Do this:

From the left panel:

Drag:

- Category → Columns
- Sales → Rows

Tableau will automatically create a bar chart.

Step 4: Create Another Chart (Very Important for Viva)

Pie Chart

Click:

Show Me

(top-right corner)

Then select:

Pie Chart

Now:

- Drag Category → Color
 - Drag Sales → Angle
-

Step 5: Create Dashboard

Steps:

1. Bottom left → Click:

New Dashboard icon

2. Drag your charts into dashboard
 3. Resize charts if needed
-

Step 6: Create Story (Optional but asked often)

Steps:

1. Bottom left → Click:

New Story

2. Add dashboard/sheets
 3. Add captions
-

Easiest Chart Combination for Exam

Do these 3:

1. Bar Chart → Category vs Sales
2. Pie Chart → Category Distribution
3. Line Chart → Profit over Time

That is more than enough for practical.

Important Viva Questions They Ask Here

Q1. What is Dimensions and Measures?

Dimensions

Qualitative data:

- Category
- Region
- Customer Name

Measures

Numerical data:

- Sales
- Profit
- Quantity

Q2. What is Dashboard?

Combination of multiple visualizations in one screen.

Q3. What is Story?

Sequence of dashboards/charts explaining insights.

Super Important Tip

If examiner asks:

“Explain what you analyzed.”

Say:

The Superstore dataset was analyzed to visualize sales, profit, and category-wise performance using charts and dashboards.
