

## How to Perform Transformation in Power BI

After uploading your Titanic dataset in Microsoft Power BI:

---

### STEP 1: Open Power Query / Transform Data

After dataset loads, find and click:

Transform Data

This opens the **Power Query Editor**.

---

### STEP 2: Perform Simple Transformations

For practical exams, do these easy transformations:

---

#### 1. Remove Null/Blank Values

##### Example: Age Column

##### Steps:

1. Click column:

Age

2. Click filter dropdown on column header

3. Uncheck:

(null)

4. Click OK

OR

Use:

Home → Remove Rows → Remove Blank Rows

---

#### 2. Rename Column

Example:

Survived → Survival\_Status

##### Steps:

1. Right-click column name
2. Select:

Rename

3. Type new name
- 

### **3. Change Data Type**

Example:

- Age → Whole Number
- Name → Text

#### **Steps:**

1. Click column
2. Top ribbon:

Data Type

3. Choose type
- 

### **4. Remove Unwanted Columns**

Example:

You can remove:

- Ticket
- Cabin

#### **Steps:**

1. Select column
2. Right-click
3. Choose:

Remove

---

### **5. Filter Data**

Example:

Show only female passengers.

**Steps:**

1. Click filter dropdown on:

Sex

2. Select:

female

---

**STEP 3: Load Data**

After transformations:

Click:

Close & Apply

This loads transformed data into Power BI.

---

**BEST SIMPLE TRANSFORMATION FOR YOUR EXAM**

Just do these 3:

1. Remove null values
2. Rename one column
3. Remove one unnecessary column

That is more than enough.

---

**What to Say in Viva****Transformation Performed:**

- Removed null values
  - Renamed columns
  - Changed data types
  - Removed unnecessary columns
- 

**Important Viva Question**

**Q. Why is transformation needed?**

Answer:

Transformation improves data quality and prepares data for analysis and visualization.
